

# Neuron ESB Training: Fundamentals

## Answers

---

### Exercises

1. True or **false**: Neuron ESB Explorer is a server application?
2. What activities require a Neuron ESB database to function?
  - a. Workflows
  - b. Auditing
  - c. Activity Session Monitoring
  - d. All of the Above**
3. The term Neuron ESB uses for message pattern at the API level is
  - a. Direction
  - b. Semantic**
  - c. CorrelationExpectation
4. True or **false**: Neuron ESB can only pass XML data?
5. **True** or false: Processes can be attached to client connectors and adapter endpoints as well as parties?
6. In what mode do adapter endpoints need to be running in order to attach a business process?
  - a. Publish**
  - b. Subscribe
7. Which of the following statements is false?
  - a. Neuron ESB Processes are maintained on the server and sent in a serialized form to any Parties they are attached to.
  - b. Neuron ESB Processes only execute on the Server.**
  - c. Neuron ESB Processes support nearly any processing imaginable.
  - d. Parties in Winform apps running Processes can have those Processes utilize resources that will only exist on that client machine thereby enabling certain dynamic behaviors.
8. Workflows are attached to:
  - a. Topics
  - b. Parties
  - c. Workflow Endpoints**
9. A workflow can span:
  - a. Less than a second
  - b. Hours
  - c. Days
  - d. All of the above**
