SAMSKIP

Logistics giant achieves more green, sustainable and cost-effective transport with Neuron ESB

The Challenge

- Modernize operations to improve delivery to customers worldwide
- Unlock functions and services caught in more than 20 LOB systems and apps
- Move from a single-tier IT environment to a service-oriented architecture

The Solution

Neuron ESB, an easy-to-use enterprise service bus that integrates with Microsoft and non-Microsoft platforms, systems and applications to provide real-time, reliable and durable messaging, business processing, workflow, and web services management.

The Benefits

- Provides better management of systems, software and business processes
- Delivers real-time knowledge and insight to enhance customer service
- Integrates disparate systems and applications to improve operations
- Supports modernization by enabling company to adopt an SOA approach
- Leverages company's existing .NET developers to accelerate project deployment

" *Samskip's quest for deep integration has led us to abandon our legacy systems and embrace Neuron ESB. We now have a robust and easy-to-use enterprise service bus that offers high availability, scalability and performance.* "

– Ron van Gessel, Manager System Development, Samskip Multimodal
